

80229—Inventory Control in

This Microsoft Dynamics GP 2010 Inventory Control training class explores all aspects of the Inventory Control module, from the initial setup of inventory items and the multiple methods of valuation supported, to the types of inventory transactions available and the tight integration to the Purchase Order Processing and Sales Order Processing modules. This course also shows you how to define default system parameters to improve user efficiency and cut down on costly data entry errors. These parameters include General Ledger accounts used in the Inventory Control module, as well as sites, product classes, valuation methods, and more.

Audience:

Inventory Control training is recommended for anyone who plans to implement, use, maintain, consult or support any part of the Inventory and Order Processing series. The training material is targeted towards administrators, office managers, CEOs, and consultants who need to understand the technical aspects of Inventory Control and gain foundational knowledge of the application functionality.

Event Goals:

- Learn how Inventory Control module transactions integrate with other Microsoft Dynamics GP 2013 modules
- Learn to define Inventory Control setup options that allow you to customize the system to better fit your organization's unique needs
- Learn to use the Inventory Control module to process receipts, make adjustments to inventory, and transfer transactions in Dynamics GP 2013
- Learn to use Inventory inquiry screens and reports to extract and analyze appropriate information to maintain and improve inventory business processes
- Learn to create and assemble kits in Dynamics GP 2013
- Learn to understand how maintenance screen options in Dynamics GP 2013 affect transactions in the Inventory Control module
- Learn to process physical inventory transactions and record the results in Dynamics GP 2013
- Learn to document month-end processes and close the Inventory Control module

Event Prerequisites:
